Achieve an efficient production with GO.Historian

How do I collect, archive and distribute huge amounts of production data?

Can I convert vast amounts of distributed data into knowledge of raw data?

GO.Historian helps you monitor and measure the production. The system provides you with vital and important information about the production, equipment and processes.

What do you achieve?

GO.Historian helps you monitor and measure the production. The system provides you with vital and important information about the production, equipment and processes.

Data is an important source for knowledge and optimization of the production – GO.Historian can help you with this. The system makes it possible to collect and archive large amounts of data rapidly and efficiently.

GO.Historian is easy to implement and a solid tool for collecting data. The system may be combined with GO.Reports, which makes it possible to use your data in physical or online reports for future use by an employee or external partners.

The value you get

- Make the right decision - faster
Collect, archive, and distribute tremendous volumes of production information at extremely high speeds and drive better decisions
- Real-time information
Aggregate large amounts of information for true process visibility and feed higher-level operations management systems with accurate, real-time information
- Meaningful context to large amounts of data
Gain meaningful context to vast amounts of raw data from across your operations with powerful enterprise data management
- Combine with other GOSystem modules
Combine the system with GO.Reports and store your data in physical or online reports for future use
